

## **TUBE** TECHNOLOGY

Precision in tube manufacturing

Curved pipes can be found in the most diverse areas because they are fundamental components in many applications of our daily lives. For decades, Leistritz has been working as a reliable partner in the automotive industry and agricultural engineering. High quality and absolute delivery reliability play a key role here. But it is not only the everyday applications that excite

us, we also like to take on new challenges. Therefore, we develop and manufacture special solutions. In addition to components for exhaust systems or connecting tubes, we also manufacture suction lines for utility vehicle engines as well as frame components and structural components for general machine construction.

### INDUSTRIES

- Automotive industry
- Machine construction
- Agricultural engineering

» We perform in keeping with the motto  
“Precision in tube manufacturing” in  
several branches.

### EXAMPLES OF APPLICATION

- Filler necks for automobiles
- Guide tubes for roll bars
- Tailpipes for exhaust systems
- Ventilation tubes for tank systems
- Components for exhaust systems
- Head rest bar for automobiles
- Exhaust pipes for auxiliary heating
- Components for module racks
- Complete welded modules
- Truck mirror mountings
- Tine support and bearing tube components
- Connecting tubes
- Radiator pipes
- Seat frames
- Arm rests

### OUR PROCESSING METHODS:

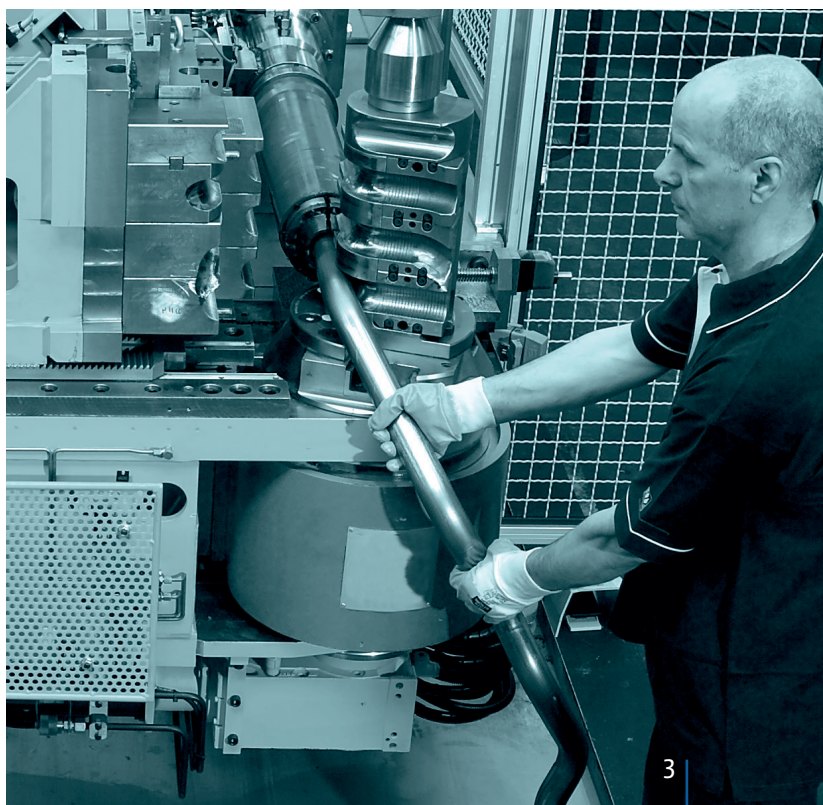

- Bending on CNC pipe bending machines
- Assembly and welding to modules by means of welding robots and automatized welding equipment
- Machining of components and manufacturing of tools and production equipment by means of CNC machine tools
- Cutting, deburring and cleaning of tubes by means of powerful sawing and washing machines
- Expanding, pulling-in and calibrating of tubes on special machines
- Innovative production solutions for manufacturing tube contours according to customer specifications
